people's shifting attitudes about inclusion, we tend to think about individuals taking a linear journey. That over time, attitudes evolve in one direction or the other, either towards a more inclusive attitude (hopefully) or a less inclusive one (unfortunately). But that's too simplistic. People are more complicated than that, and the path isn't strictly linear but can have pauses, backtracking, and then new steps forward.

This became clear to us with **WHY THREE QUESTIONS?**

It isn't fair to Population Sampling. For assess someone's the third year in a row, we attitude on this asked a set of three subject with just questions that helped us one question, as

2022

towards inclusive content in museums. With those results, each year we develop a spectrum of to inclusive. Overall, results show good news. The majority of people want museums to share inclusive content, and inclusive attitudes strongly

there is no single question that helps us sort this out accurately. To learn more about the three questions we use, see our 2021 Data Story "The Spectrum of Inclusive \ Attitudes: Methodology.'

Over time, however, things are a bit more Let's first examine frequent museum-goers and their attitudes. BACK IN 2021, we found that just under half of museum-goers fell in the "inclusive" segment of the spectrum, and just under one in five were in the "anti-inclusive" segment. LEANS LESS STATUS QUO **ANTI-INCLUSIVE 17**% 8% **18**%

ANTI-INCLUSIVE
